# Arnav Deepaware

New York, NY | 929-410-9650 | arnav.deepaware@gmail.com | LinkedIn | GitHub | arnavd.co

## Education

**The City College of New York (CUNY)** — New York, NY
**B.S. in Computer Science**, GPA: 3.5 — Expected May 2027

**Relevant Coursework:** AI Engineering, Software Engineering, Data Structures & Algorithms, Distributed Systems, Database Systems, Operating Systems

**Affiliations:** Google Software Engineering Mentorship (1 of 80 NYC participants), TEDxCUNY (Co-Director), ACM (Treasurer), CUNY Tech Prep, Deloitte Immersion Fellowship

## Experience

**truCurrent** — *Software and Product Development Intern* — New York, NY | Jun 2025 – Dec 2025

- Built an EV charging analysis application using Python, React, and Azure that processed fleet data and generated annual load profiles to support infrastructure planning.
- Developed Python data pipelines that validated and transformed CSV data into Parquet and generated 14 metrics used in internal analysis and reporting.
- Built a policy-monitoring application using Python and public legislative APIs that tracked bill status changes and generated repeatable weekly reports for non-technical users.

**Break Through Tech** — *AI Fellow* — New York, NY | May 2025 – Aug 2025

- Completed an applied machine learning fellowship covering supervised and unsupervised learning, model development, validation, and data analysis using Python, scikit-learn, and pandas.
- Built machine learning projects involving data preparation, model training, evaluation, and interpretation of results.

**The Difference** — *Software Engineer Intern* — New York, NY | Jun 2024 – Aug 2024

- Built 3 Flutter profile screens from Figma designs and integrated 23 Laravel REST API endpoints to display and manage backend data.
- Worked with designers and backend engineers to debug API integrations, refine user flows, and ship product updates through agile development cycles.

**The City College of New York** — *Computer Science Tutor* — New York, NY | Feb 2024 – May 2025

- Tutored 16+ students in C++, Java, data structures, algorithms, and debugging, helping students work through programming problems and understand core CS concepts.

## Projects

**SitRight** | ***Second Best Hack @HackKnight*** – *JavaScript, MediaPipe, TensorFlow/Keras, Python*

- Built a real-time posture detection application using MediaPipe body landmarks and a TensorFlow/Keras model to classify posture and provide live feedback.
- Moved model inference from the server to the browser, reducing observed latency from roughly 400–600 ms to under 50 ms while keeping webcam frames on-device.

**A-eye** | ***Best Health Hack*** – *Gemini Vision, Node.js, Next.js, WebRTC, WebSockets, ElevenLabs*

- Built a multimodal accessibility assistant for blind and visually impaired users using camera input and Gemini vision reasoning to interpret products and surrounding visual information.
- Implemented a voice-first interaction pipeline combining speech input, contextual AI reasoning, and ElevenLabs text-to-speech for hands-free follow-up queries.

**LLM Control Plane** | *Python, FastAPI, Redis, Docker, Prometheus, Grafana*

- Built a FastAPI gateway for managing access to multiple LLM providers with authentication, model access rules, rate limits, usage budgets, retries, and fallback routing.
- Added Redis-backed request controls, Prometheus/Grafana monitoring, and automated tests covering routing, access policies, and failure handling.

## Technical Skills

| | |
|---|---|
| **Languages** | Python, Java, JavaScript/TypeScript, SQL, C++ |
| **Backend & Web** | Flask, FastAPI, React, Node.js, REST APIs, WebSockets |
| **Data & Infrastructure** | PostgreSQL, Redis, Docker, Azure, Git, GitHub Actions |
| **AI Skills** | LLM APIs, RAG, Gemini, Claude Code, prompt engineering |
